

Laboratory Medicine

Vancouver Island Health Authority (VIHA) Laboratory Services

The Department of Laboratory Medicine, Pathology and Medical Genetics (LMPMG) employs Medical Laboratory Technologists and Medical Laboratory Assistants. At VIHA, your unique, specialized skills are highly valued.

Our Team

The staff are Medical Laboratory Technologist program graduates that are certified by and registered with the Canadian Society of Medical Laboratory Science (CSMLS). Our sites provide regional support as part of our hub and feeder network delivering Hematology, Chemistry, Transfusion Medicine, Microbiology and Anatomic Pathology Services. Typically, we prefer one year recent related clinical experience in the associated disciplines, however we will consider an equivalent combination of education, training, and experience and assist in your continuing development.

The Work Environment

Our integrated island-wide Laboratory Information System (LIS) allows for seamless delivery of quality information regardless of the patient or provider location. Our adoption of a Quality Systems Essentials model is supporting our goal of standardized processes and procedures to fully implement a quality system. This includes standardization of our equipment platforms.

Variety of Locations Available

Whether you prefer small town, rural communities or big cities, Vancouver Island has it all to offer. You can choose the location to match your lifestyle.

Benefits of Working for VIHA

We are always looking for more staff to compliment our hard working, dedicated teams. In return we offer:

- Competitive salary
- Excellent benefits package
- Relocation assistance
- Monday to Friday shifts with some rotational shifts
- Flexible work schedules available
- Training/education opportunities

The Best Place on Earth
